

Summary - Apa yang Sudah Dilakukan

✓ Yang Sudah Selesai:

1. ✓ Folder `docs/models/` dibuat dengan 3 files:
 - `model.json`
 - `group1-shard1of2.bin`
 - `group1-shard2of2.bin`
2. ✓ Code `loadModelFromURL()` ditambahkan ke `MoveNetModel.js`
3. ✓ `PoseDetector.js` diupdate untuk gunakan URL by default
4. ✓ GitHub Pages di-deploy dari branch `mobileFinal` folder `/docs`
5. ✓ Model akan tersedia di:

```
https://ameliaocham.github.io/movenet-pose-MobileApp-playground/models/model.json
```

🔑 Langkah Selanjutnya (Test & Finalize):

1. Tunggu GitHub Pages Deploy (1-2 menit)

Cek status di:

```
https://github.com/Amelia0chaM/movenet-pose-MobileApp-playground/settings/pages
```

Akan muncul pesan: "Your site is live at..."

2. Test Model URL di Browser

Buka browser dan akses:

```
https://ameliaocham.github.io/movenet-pose-MobileApp-playground/models/model.json
```

Kalau muncul JSON content → **SUKSES!** ✓

3. Commit Perubahan Code
-

```
cd /home/amelia-ocha/Documents/project_izin/react-native-movenet
git add src/models/MoveNetModel.js src/models/PoseDetector.js
git commit -m "feat: add GitHub Pages model loading support"
git push origin mobileFinal
```

4. Test Aplikasi di HP

```
# Di terminal yang masih running Metro Bundler, tekan:
r # untuk reload app
```

Atau restart Metro Bundler:

```
npx expo start --dev-client
```

Lalu scan QR code di HP.

5. Cek Logs di Terminal

Logs yang diharapkan:

```
✓ SUKSES - Jika model berhasil load dari URL:
LOG 🌐 Loading model from URL: https://ameliaocham.github.io/...
LOG ⌚ Downloading model... (this may take a few seconds)
LOG ✓ REAL Model loaded successfully from URL!
LOG Model inputs: [...]
LOG Model outputs: [...]
LOG 🎯 Status:
LOG   ✓ Camera: Fully functional
LOG   ✓ UI/UX: Fully functional
LOG   ✓ Pose Detection: REAL & ACCURATE

● FALLBACK - Jika masih loading atau GitHub Pages belum ready:
LOG ✗ Error loading model from URL: ...
LOG ⚠ Falling back to mock model...
LOG ✓ Mock Model Status: (mock masih aktif)
```

PROF

Expected Timeline:

- **Sekarang:** GitHub Pages sedang deploy (~1-2 menit)
- **+2 menit:** Model URL bisa diakses
- **+3 menit:** Test aplikasi dengan model asli
- **+5 menit:** Selesai! Aplikasi dengan REAL model berfungsi

⚡ Quick Commands:

Test Model URL (tunggu 2 menit dulu):

```
curl -I https://ameliaocham.github.io/movenet-pose-MobileApp-playground/models/model.json
```

Commit Code Changes:

```
cd /home/amelia-ocha/Documents/project_izin/react-native-movenet
git add src/models/
git commit -m "feat: enable GitHub Pages model loading"
git push origin mobileFinal
```

Restart Metro Bundler:

```
npx expo start --dev-client
```

What's Next:

Setelah model berhasil load dari URL:

- ✔ Pose detection akan AKURAT (bukan random lagi)
- ✔ Aplikasi siap untuk demo/testing
- ✔ Code siap untuk merge atau production

Tunggu 2 menit untuk GitHub Pages deploy, lalu test! 🚀
